

BRAND ORIGIN

The famous European painting master
Anthony Van Dyck

VANDYCK

The brand concept originates from the artistic achievements of the famous European painting master Anthony Van Dyck. Just as Van Dyck interprets life through art, we interpret life through flooring, integrating elegance, nobility, environmental protection, and the pursuit into it.

BRAND INTRODUCTION

VANDYCK

VANDYCK is designed for the aesthetics of life, with the responsibility of promoting the green development process of the industry, in order to create high-value and high-quality home living experiences for families worldwide.

As a high-end flooring manufacturer, VANDYCK's products are regularly tested by third-party independent testing institutions. From production processes, raw material screening, energy use, and environmental management to product quality, VANDYCK strictly follows high requirements that exceed industrial standards, assumes brand responsibility, and guarantees brand reputation.

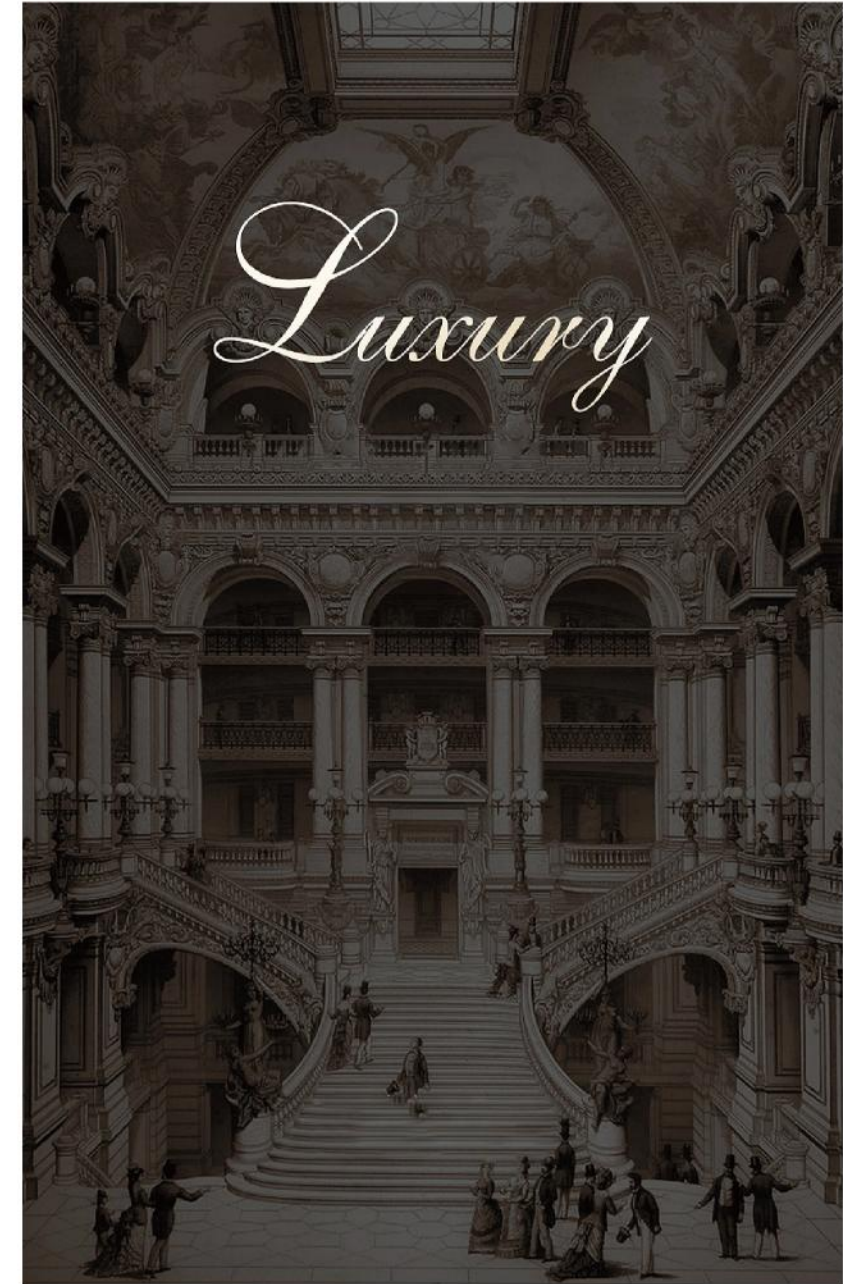

Our values are: sincerity, innovation, progress, and sustainable development. Whether it's company development, product philosophy, product design, and material selection, VANDYCK brings people a stunning and refreshing experience and feeling. The inherent code of conduct of VANDYCK is reflected in its high-quality and high-level products, which clarifies VANDYCK's goal: to make every home unique, beautiful, and comfortable.

Brand Certifications

Multiple certifications, reliable quality

Designed for life aesthetics

Inherited from the luxury of the court aristocracy, what we do is not
just flooring
We engrave the concept into the floor
Reflecting the height of life through art
We design for the aesthetics of life
Showcasing a brand new way of life and philosophy

Brand Theory

DESIGN+INNOVATIVE QUALITY=HIGH-QUALITY HOME ENVIRONMENT

The art of life is the appreciation of beauty and constantly getting creative inspiration from it, while quality is our eternal pursuit of life. Inheriting this quality requires starting from very high-quality floor under our feet.

VANDYCK flooring combines the art of life with quality, allowing customers to express their personality through high-level artistic design and innovative quality, creating a high-quality home environment at home.

SUSTAINABLE DEVELOPMENT

Sustainable raw materials
+
Multiple international certifications
=
Principles of sustainable development

We respect the principle of sustainability very seriously and follow it accordingly.

We are committed to making every wood flooring source from sustainably managed and certified North American forests through the Sustainable Forestry Initiative (SFI). All of our products have passed multiple certifications, including FSC and PEFC international forest certification, CE international safety certification, the U.S. CARB, and other certifications, proving our commitment to creating a healthy living environment.

INTRODUCTION TO PRODUCTION PROCESS

QUALITY IS THE LIFELINE
OF PRODUCTS

SPECIES

FACILITIES

COATING

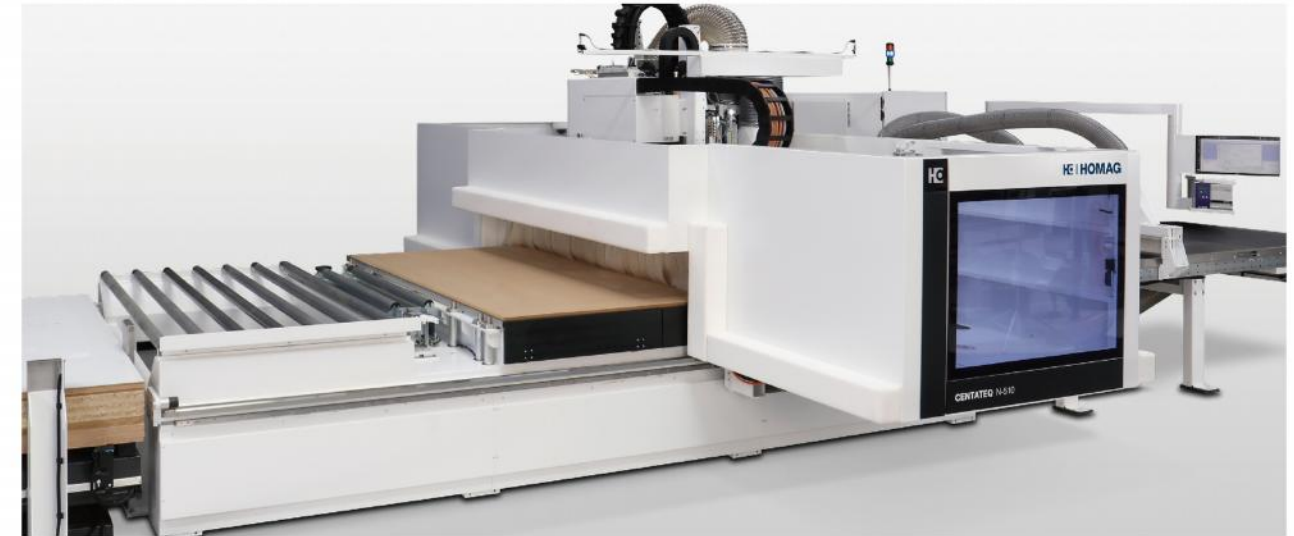

GLUE

WOOD SPECIES

PRODUCTION FACILITIES

HOMAG

We use fully automatic Homag line tongue and groove cutting equipment and cutting tools imported from Germany. The cutting process is extremely precise, the grooves are smooth and burr-free reducing height differences and making the pavement smoother

ADVANTAGES

We only purchase logs and wood from high-quality suppliers, and only purchase high-quality wood from sustainable forestry belts. Each piece of wood has a unique identity and lineage that can be traced back to its origin.

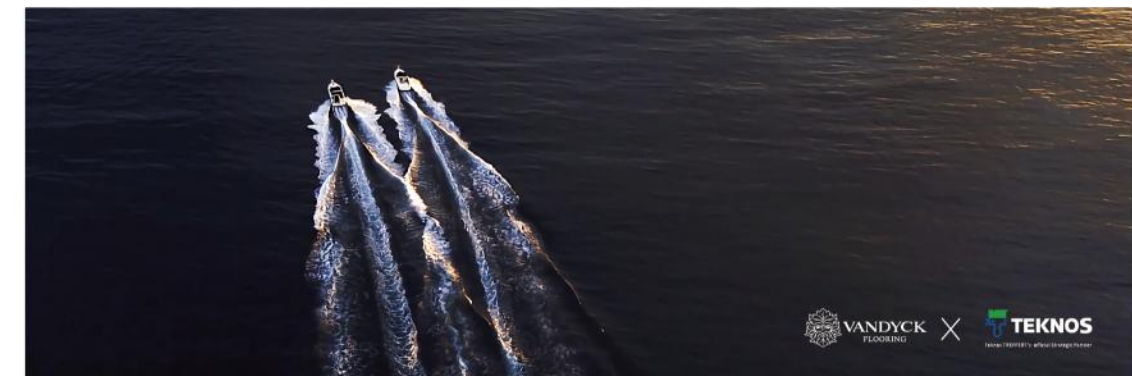

The tough quality and precious characteristics that have been tempered over the years highlight the unique style and quality of each floor. Starting from the source, every VANDYCK floor has extraordinary quality.

German Teknos Treffert paint is known for its high quality, high environmental protection and cost-effectiveness. It does not contain any volatile substances that are harmful and is a truly green and environmentally friendly product; its products are complying with international standards.

As a strong strategic partner of German Teknos Treffert paint for long years

we use their lacquer product only. Through the 9 bases coating and 3 surfaces coating, for a total of 12 layers of coat sealing process, the paint adhesion is enhanced, so the floor quality is scratch-resistant, wear resistance, slip resistance and waterproof performance.

UV LACQUER

UV lacquer is a coating that hardens in just a few seconds after being exposed to ultraviolet (UV) radiation. When applied to the surface of wood, it will form a hard wear-resistant layer, protecting the wood surface and minimized physical scratch to the wood material.

HARDWAX OIL

Hardwax oil is made based on natural vegetable oils and waxes. It is applied to the surface of wood and can expand and contract synchronously with the wood. The oil and wax components will penetrate into the interior of the wood and protect it, while the wax can keep the pores on the surface of the wood open, forming an elastic surface.

	COMPARISON BETWEEN UV LACQUER AND HARDWAX OIL	
	HARDWAX OIL	UV LACQUER
Environmental protection level	The raw materials are mainly natural vegetable oils such as flax oil and palm wax, which are relatively environmentally friendly.	Instantly solidified into a film very environmentally friendly
Hardness	poor	strong
Adhesion	poor	strong
Waterproof performance	poor	average
Customization	Suitable for DIY painting	Can only be mass customized through factory

Excimer skin sensory system

The matte curing system for skin sensation adopts a 254nm UVC light source. It is specially designed and does not require nitrogen sealing. It can also achieve an extremely low gloss of 2-3° and a baby-like soft skin effect.

- Greatly reduces the amount of initiator used and has extremely low odor residue
- The stain resistance is significantly better than traditional UV curing
- The surface texture, gloss, and tactile sensation of the film can be adjusted on-site, achieving multi-functional DIY

Slim System

- VANDYCK unique formula with Ultimate Open style is suitable for most production lines in the industry
- Enormous Abrasion Resistance ensured the life time of product
- Super matte gloss enhanced natural beauty of wood

Finland Dynea Phenolic Glue

One of the leading brand in the field of phenolic glue

Following the concepts of health, safety and environmental protection, and is extracted from pure natural plants.

VANDYCK products are glued with Finland food-grade Dynea Glue. While ensuring that the bonding strength and water resistance meet international standards with lower release the amount of formaldehyde. The environmental protection level reaches the European E0 standard and has passed the U.S. CARB II Certification, which is healthy and environmentally friendly.

PRODUCT INTRODUCTION

Designed for life
aesthetics

VANDYCK'S PASSION FOR PRODUCTS HAS RAISED
ITS PRODUCT DEVELOPMENT PERSPECTIVE FROM A
RATIONAL TO A PERCEPTUAL LEVEL.

PRODUCTS MUST BE UNIQUE, THUS CRE-
ATING "PRODUCTS WITH SOUL".

SUSTAINABILITY

NATURE

Based on natural inspiration, the surface layer of planed with every fine wood grain, tells every detail of nature, quiet, harmonious, comfortable and calm.

Customization
Pursuit of individuality

VANDYCK flooring adheres to the ultimate attitude of an "artist" and treats floor creation as art.

For customers who pursue individual needs
we provide high-end customized services.

Different colors, different wood species, different styles...
We use unique parquet designs to present works of the highest
craftsmanship quality and artistic appreciation value.

Stairnose.Stair treads

Flooring products should not just be used on the ground, but should maximize their use value. Therefore, we have developed flooring products for the design and utilization of various spaces such as stairs, wall panels, and suspended ceilings.
